

# Cyber Theft Ring

Malware exploiters purchase malware and use it to steal victim banking credentials. They launch attacks from compromised machines that allow them to transfer stolen funds and deter any tracking of their activities.

Malware coders develop malicious software that is sold on the black market.

Money mule networks are comprised of individuals engaged in the transfer of stolen funds who retain a percentage for their services.

Victims include individuals, businesses, and financial institutions.

## How the Fraud Works

Victims are both financial institutions and owners of infected machines.

Money mules transfer stolen money for criminals, shaving a small percentage for themselves.

Criminals come in many forms:  
 ● Malware coder  
 ● Malware exploiters  
 ● Mule organization

## Global Reach
